Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (amended) A multilayer stretch film comprising:

a cling layer comprising ultra low density polyethylene; [[,]]

a non-cling layer[[,]]; and

at least one core layer ~~including~~ comprising from about 97.0-99.9% by weight linear low density polyethylene and from about 0.01-3.0% by weight low density polyethylene ~~in an amount ranging from about 0.01% to about 3% by weight of the core layer~~.

2. (canceled) The stretch film as claimed in claim 1, wherein the low density polyethylene of the at least one core layer is included in an amount less than 3% by weight of the core layer.

3. (original) The stretch film as claimed in claim 1, wherein the stretch film has a gauge that is no greater than about 90 gauge.

4. (original) The stretch film as claimed in claim 1, wherein the stretch film has a gauge that is no greater than about 80 gauge.

5. (original) The stretch film as claimed in claim 1, wherein the stretch film has a gauge that ranges from about 50 gauge to about 80 gauge.

6. (original) The stretch film as claim in claim 1, wherein the linear low density polyethylene has a density ranging from about 0.900 g/cm^3 to about 0.940 g/cm^3 and a melt index of about 2.0 g/10 min to about 10.0 g/10 min.

7. (original) The stretch film as claimed in claim 1, wherein the linear low density polyethylene is an ethylene copolymerized with a C_3-C_{10} α-olefin.

8. (original) The stretch film as claimed in claim 1, wherein the low density polyethylene is an ethylene homopolymer.

9. (original) The stretch film as claimed in claim 1, wherein the low density polyethylene is an ethylene copolymer.

10. (amended) The stretch film as claimed in claim 1, wherein the low density polyethylene is an ethylene copolymerized with at least one selected from ~~of~~ the group consisting of vinyl acetate, methyl acrylate, ethyl acrylate, ~~and~~ acrylic acid and mixtures thereof.

11. (original) The stretch film as claimed in claim 1, wherein the low density polyethylene has a density of about 0.900 g/cm^3 to about 0.940 g/cm^3 and a melt index of 0.1 g/10 min to about 10.0 g/10 min.

12. (amended) The stretch film as claimed in claim 1, wherein the cling layer further comprises a ~~includes ultra low density polyethylene and~~ plastomer ~~in an amount of up to about 40%~~.

13. (amended) The stretch film as claimed in claim 1, wherein ~~the cling layer includes~~ said ultra low density polyethylene ~~that~~ is an ethylene copolymerized with a C_3-C_{10} α-olefin~~, with~~ and said ultra low density polyethylene has a density from about 0.850 g/cm^3 to 0.900 g/cm^3 and a melt index of 1.0 g/10 min to 20.0 g/10 min.

14-23 (canceled)

24. (new) A multilayer stretch wrap film comprising:

at least one first layer comprising an ultra low density polyethylene;

at least one second layer comprising a polypropylene;

at least one third layer comprising a mixture of a linear low density polyethylene and a low density polyethylene.

25. (new) The film of claim 24, said first layer further comprising from about 0-40% by weight of a plastomer.

26. (new) The film of claim 25, said plastomer being a polyethylene copolymerized with a C_3-C_{10} α-olefin.

27. (new) The film of claim 26, said plastomer being a polyethylene copolymerized with a C_8 α-olefin.

28. (new) The film of claim 27, said plastomer having an unstretched cling of about 250 g and a 200% stretch cling of about 66 g.

29. (new) The film of claim 25, said plastomer having a density of from about 0.850-0.900 g/cm^3.

30. (new) The film of claim 25, said plastomer having a melt index of from about 1.0-20.0 g/10 min.

31. (new) The film of claim 24, said first layer further comprising about 15% by weight of a plastomer.

32. (new) The film of claim 31, said plastomer being a polyethylene copolymerized with a C_3-C_{10} α-olefin.

33. (new) The film of claim 32, said plastomer being a polyethylene copolymerized with a C_8 α-olefin.

34. (new) The film of claim 33, said plastomer having an unstretched cling of about 250 g and a 200% stretch cling of about 66 g.

35. (new) The film of claim 31, said plastomer having a density of from about 0.850-0.900 g/cm^3.

36. (new) The film of claim 31, said plastomer having a melt index of from about 1.0-20.0 g/10 min.

37. (new) The film of claim 24, said third layer comprising from about 40-90% of the total thickness of said film.

38. (new) The film of claim 24, said low density polyethylene comprising from about 0.01-3.0% by weight of said third layer.

39. (new) The film of claim 38, said linear low density polyethylene comprising from about 97.0-99.9% of said third layer.

40. (new) The film of claim 24, said low density polyethylene having a density of from about 0.900-0.940 g/cm^3.

41. (new) The film of claim 24, said low density polyethylene having a melt index of from about 0.10-10.0 g/10 min..

42. (new) The film of claim 24, said low density polyethylene being an ethylene homopolymer.

43. (new) The film of claim 42, said ethylene homopolymer having a density of from about 0.921 g/cm^3.

44. (new) The film of claim 42, said ethylene homopolymer having a melt index of from about 0.2 g/10 min..

43. (new) The film of claim 24, said low density polyethylene being an ethylene copolymer.

44. (new) The film of claim 43, said ethylene copolymer being ethylene copolymerized with a monomer selected from the group consisting of vinyl acetate, C_3-C_{10} α-olefin, and mixtures thereof.

45. (new) The film of claim 24, said linear low density polyethylene being a polyethylene copolymerized with one or more C_3-C_{10} α-olefins.

46. (new) The film of claim 45, said linear low density polyethylene being a polyethylene copolymerized with a C_8 α-olefins.

47. (new) The film of claim 46, said linear low density polyethylene having a density of about 0.917 g/cm^3.

48. (new) The film of claim 46, said linear low density polyethylene having a melt index of about 4.0 g/10 min..

49. (new) The film of claim 24, said linear low density polyethylene being an ethylene copolymerized with a compound selected from the group consisting of butene, hexene, 4-methyl-1-pentene, octene, copolymers thereof, and mixtures thereof.

50. (new) The film of claim 24, said second layer having a density of from about 0.890-0.910 g/cm^3.

51. (new) The film of claim 24, said second layer having a melt index of from about 2.0-40.0 g/10 min..

52. (new) The film of claim 24, said second layer being a polypropylene homopolymer.

53. (new) The film of claim 24, said second layer being a polypropylene copolymer.

54. (new) The film of claim 53, said polypropylene being copolymerized with a comonomer selected from the group consisting of ethylene, C_3-C_{10} α-olefins, and mixtures thereof.

55. (new) The film of claim 54, said comonomer comprising from about 0-10 % by weight of said polypropylene.

56. (new) The film of claim 24, said third layer comprising from about 40-96% of the total thickness of said film.

57. (new) The film of claim 24, said film having a thickness of from about 0.5-1.5 mm.

58. (new) The film of claim 24, said film having a gauge of from about 45-90.
